Please do not order less than 100 plants unless you plan to pick these up at nursery since shipping containers by common carrier is not economically feasible. We are usually able to arrange delivery by our truck at a reasonable cost on split load amounts from 100-700 plants. 700-3,000 are truckload lots which we deliver at cost. You are always welcome at the nursery to pick up any amounts of 10 or above.

CHRISTMAS TREES

Approximately 50 to 60 million Christmas trees are used in this country annually, and the growing of them in commercial plantations is getting to be a very lucrative business. Good planting stock is imperative for success. We grow large quantities for this very purpose and can supply quality trees at reasonable prices. Plant a few acres every year and you will soon have a nice annual income. We would be happy to advise you on soil, cultural practices, etc.

Seedlings are often planted for Christmas trees in an attempt to save money. It is false economy. True, seedlings cost much less, but as good survival can never be expected from seedlings as from transplanted stock. The few extra cents a good transplant costs brings tremendous dividends for survival is excellent, the need for replanting is eliminated, and saleable trees can be grown two to three years sooner than if seedlings were used.

The varieties listed next page are the most used for Christmas tree planting, although Douglas Fir, Concolor Fir, and Ponderosa Pine are also frequently used. Write for special quotations.

The sizes on next page have wider variance than the same variety offered elsewhere in this list. By saving the cost of grading we can offer them cheaper, and for Christmas tree planting they are equally as good.
